Date: 5th April 2024

Product Information

The Crestchic Solar control system, as fitted to all microprocessor controller loadbanks built up to May 2020, is no longer supported by software revision and therefore the Eclipse software may not be compatible with future Windows platforms. The Solar PCB hardware is now considered as to be unsupported with spare PCB's no longer available from stock. Crestchic strongly recommend that, those customers wishing to future proof their equipment, consider upgrading their loadbanks currently using the Solar PCB hardware to the recently introduced Nova PCB hardware, using fibre optic control cabling.

The HHT100 controller is now obsolete and repairs to such are no longer possible.

Details are attached of the LC80 touch screen tablet, which can also be used to replace HHT100, the Nova control system and the available options for inter-connection of multiple loadbanks, fibre optic cable options and system stop function.

Further details are available upon request to service.uk@crestchic.com

Yours Sincerely

A handwritten signature in black ink, appearing to be "J. Smith", written over a light grey rectangular background.
